

## Eliminate The Guesswork!

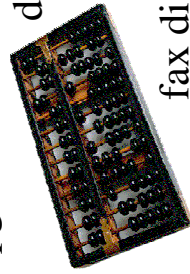

Style. Technology. Times change. What once was “in” is now “out.” The slide rule. Abacus. Steam engine. Model T. Eight track tape. Rotary phone. Manual typewriter. All were useful, maybe even revolutionary in their day. All have been passed by.

In the energy industry, service companies must continually

update technology. Or be passed by. At Cardinal Surveys, we continually strive to upgrade our technology. All digital trucks.

All digital data. Email or fax digital logs. In-

stant field prints. Optical archival of critical data. Direct input into your field-wide databases.

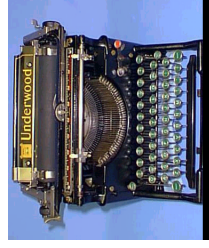

The world and the global economy have been revolutionized by the computer. You have to take advantage of it. Or be passed by.

Digital signal processing. Digital link to down hole tools. Real-time recording and display.

Isn't it time you asked yourself “why?” Why are we using them when we could be

using Cardinal? Technology to do it right. And not be passed by.
